September 7, 2022 Rev. 1.11

Pyxis Lab, Inc. 21242 Spell Circle Tomball TX, 77375 www.pyxis-lab.com

© 2017 Pyxis Lab, Inc. Pyxis Lab Proprietary and Confidential

#### Confidentiality

The information contained in this manual may be confidential and proprietary and is the property of Pyxis Lab, Inc. Information disclosed herein shall not be used to manufacture, construct, or otherwise reproduce the goods described. Information disclosed herein shall not be disclosed to others or made public in any manner without the express written consent of Pyxis Lab, Inc.

#### **Standard Limited Warranty**

Pyxis Lab warrants its products for defects in materials and workmanship. Pyxis Lab will, at its option, repair or replace instrument components that prove to be defective with new or remanufactured components (i.e., equivalent to new). The warranty set forth is exclusive and no other warranty, whether written or oral, is expressed or implied.

#### **Warranty Term**

The Pyxis warranty term is thirteen (13) months ex-works. In no event shall the standard limited warranty coverage extend beyond thirteen (13) months from original shipment date.

#### **Warranty Service**

Damaged or dysfunctional instruments may be returned to Pyxis for repair or replacement. In some instances, replacement instruments may be available for short duration loan or lease.

Pyxis warrants that any labor services provided shall conform to the reasonable standards of technical competency and performance effective at the time of delivery. All service interventions are to be reviewed and authorized as correct and complete at the completion of the service by a customer representative, or designate. Pyxis warrants these services for 30 days after the authorization and will correct any qualifying deficiency in labor provided that the labor service deficiency is exactly related to the originating event. No other remedy, other than the provision of labor services, may be applicable.

Repair components (parts and materials), but not consumables, provided during a repair, or purchased individually, are warranted for 90 days ex-works for materials and workmanship. In no event will the incorporation of a warranted repair component into an instrument extend the whole instrument's warranty beyond its original term.

#### **Warranty Shipping**

A Repair Authorization (RA) Number must be obtained from Pyxis Technical Support before any product can be returned to the factory. Pyxis will pay freight charges to ship replacement or repaired products to the customer. The customer shall pay freight charges for returning products to Pyxis. Any product returned to the factory without an RA number will be returned to the customer. To receive an RMA you can generate a request on our website at https://pyxis-lab.com/request-tech-support/.

#### **Pyxis Technical Support**

Contact Pyxis Technical Support at +1 (866) 203-8397, service@pyxis-lab.com, or by filling out a request for support at https://pyxis-lab.com/request-tech-support/.

### **Related Statements**

# **Safety Information**

Please read this manual completely before unpacking, installing, and operating this equipment. In particular, pay attention to all dangers, warnings and precautions, otherwise, it may cause serious personal injury to the operator or damage to the equipment.

# **Use of Danger Information**

Danger

Indicates a potentially or urgent dangerous situation that, if not avoided, will cause death or serious injury.

#### Warning

Indicates a potentially or very dangerous situation that, if not avoided, may cause serious personal injury or death.

Warning

Indicates a potentially dangerous situation that may cause a certain degree of personal injury.

#### Attention

Indicates conditions that if not avoided, will cause damage to the instrument. This is information that needs special emphasis.

## Warning Label

Please read all labels and marks attached to the instrument. Failure to follow the instructions on these safety labels may result in personal injury or damage to the instrument.

	If this symbol appears in the instrument, it means refer to the operation and/or safety information in the instruction manual.
A	If there is this mark on the instrument housing or insulator, it means there is a risk of electric shock or death from electric shock.
	Static electricity can damage the delicate internal electronic components, resulting in reduced performance or eventual failure of the instrument.
	Electrical equipment marked with this symbol cannot be disposed of through the European public waste system after August 12, 2005. In order to comply with European regional and national regulations (EU Directive 2002 / 98 / EC), European electrical equipment users must now return abandoned or expired equipment to the manufacturer for disposal without any cost.

\*NOTE\* - Pyxis Lab is consistently updating technologies, as such, specifications may change without notice. Technical specifications on the LT-739/B and ST-765SS-FCL sensors can also be found in their respective Operation Manuals. Contact info@pyxis-lab.com for details or www.pyxis-lab.com .

# Unpackaging

2.

The package includes the following items:

- One DW-2100P Drinking Water Panel Assembled and Complete with 110VAC Power Supply Cord
  - UC-100A Touch Screen Display/Data Logger with Pyxis Sensors Prewired in RS-485 (RTU)
  - FR-200 Dual Sensor Flow Reservoir
  - o LT-739 (Warm White Light) or LT-739B (InfrRed) Ultra-Low Turbidity Sensor (as selected)
  - o ST-765SS-FCL Free Chlorine / pH / Temperature Sensor
  - Pyxis CloudLink<sup>TM</sup> 4G Gateway (as selected models ending in "G")

## **System Layout and Features**

3. The DW-2100P series are multi-parameter inline water analyzers specifically designed as a 'Turn-Key' monitoring solution for clean water applications including drinking water networks, secondary water supply and decorative/swimming water applications. The DW-2100P series offers highly accurate, real-time measurement, display and data-logging of Ultra-Low Turbidity, Free Chlorine, pH and Temperature utilizing proprietary Pyxis Lab smart sensor technology, coupled with a Pyxis touch screen display and data logging terminal. The DW2100P series is offered in a convenient and easy to integrate panel mounted format for rapid installation and simple maintenance.

Figure 1 DW-2100P

#### DW-2100P Features

- Pyxis Lab's advanced research and development sensor technologies to achieve highly accurate and stable measurement of Turbidity, Free Chlorine, pH and Temperature.
- Pyxis LT-739 (EPA) and LT-739B (ISO) ultra-low resolution turbidity sensors offer a detection light source using warm white LED in 90-degree surface scatter format in accordance with USEPA 180.1 standards or Infra-Red 860nm in accordance with ISO-7027.1 standards. The turbidity sensors are mounted in the unique Pyxis FR-200 dual sensor flow reservoir enabling the highest resolution possible of 0.001NTU with unmatched stability. The LT-739 and LT-739 offers simple calibration with the L-CAL Portable Liquid Turbidity Calibration Kit (uses 500mL per calibration).
- Pyxis ST-765SS-FCL three-parameter composite sensor is used for the measurement residual free chlorine, pH and temperature in compliance with USEPA 334.0 and ISO-7393 guidelines. The sensors advanced PCB offers built-in temperature and pH parameter compensation (up to pH 9.0) algorithms eliminating the need for a supplemental pH sensor and controller. Unique Bare-Gold electrode technology for residual chlorine measurement eliminates membranes and electrode solution replenishment commonly associated with conventional sensors. The ST-765SS-FCL has a uniquely designed flat bubble pH electrode design for reduced fouling potential. Reduce your maintenance and cost versus colorimetric chlorine measurement or conventional electrochemical sensors by utilizing Pyxis replaceable Electrode Head (EH-765) for this sensor allowing for years of reliable service. The ST-765SS-FCL may be calibrated in-situ after cleaning via DPD Free Chlorine wet chemistry test measurement of active sample.
- Pyxis FR-200 Dual-Sensor flow reservoir provides sample calming for dissipation of air-bubbles and settling of suspended solids, foam or other impurities commonly observed in drinking water influent with a recommended flow range of 1,200-1,800mL/minute. This unique flow reservoir design results in the highest level of turbidity resolution on the market and greatly extends the maintenance cycle of the sensor while providing a large buffer capacity to mitigate pressure fluctuations. The minimum inlet pressure of FR-200 flow reservoir is only 7.5 psi (0.05mpa) making it highly suitable for the end of pipe networks and secondary supply influent sampling.
- Both sensors offer a self-cleaning flat electrode design making them easy to maintain and clean.
- Simple sensor removal and replacement. Both sensors are connected to the display/data logger via RS-485 Modbus (RTU) allowing for integrated sensor calibration interface and diagnostics within the display touch screen.
- Convenient and simple to install Back-Panel (DW-2100P) for rapid and easy installation. Truly a plumb and power to go platform with intense factory setup, testing and sensor calibration prior to shipment.
- Touch screen display/data logger interface with sensor calibration integrated. Display/data logger offers 2x 4-20mA I/O as well as RS-485 and TCP-IP with remote diagnosis and parameter adjustment. Pyxis CloudLink<sup>™</sup> 4G Gateway version available.

### **5** Installation

#### 5.1. Installation Requirements

#### Power Supply: 100~240VAC 50/60Hz

**Water Supply:** Inlet water pressure should be from 7.25 – 30 psi (0.05-0.2MPa) with an inlet feedwater line diameter of ¼-inch O.D. Tubing. The DW-2100P is provided with an inlet Rotameter and PRV for sample water inlet flow control and limited pressure regulation. Depending on sample water quality, these items may be installed on the application needs and user desire. The range of inlet flow for the FR-200 should be consistently maintained between 1,200-1,800 mL per minute.

**Drainage:** The FR-200 outlet tube (20mm Tubing) located on the bottom of the FR-200, as well as the FR-200 weir overflow (3/8-inch O.D. Tubing) located on the top of the FR-200, sh<u>ould both be connected to</u> a discharge drain via gravity flow.

**Wall Mount Space:** The DW-2100P analyzer panel size is roughly 790H x 450W x 235D (mm) in dimension. Please accommodate sufficient space for mounting.

**Wall Mount Weight**: Approximately 20kg. Please use appropriate mounting hardware.

**3G/4G Network**: Make sure your mobile network is a CMCC/CUCC 3G/4G compatible network. Ensure the signal strength is sufficient in the installation eara.

#### 5.2. Tube connection

- 1. Inlet Water: Connect the ¼-inch inlet water tubing to the quick adapter provided. \*NOTE\* The inlet flow meter is shipped as a loose item and may be installed as desired by the user. If feedwater water quality is poor, users may desire to not install this flow meter. Consistent flow of 1,200-1,800mL is required.
- Weir Overflow: Connect the <sup>3</sup>/<sub>4</sub>-inch weir overflow tubing to the quick adapter provided. This line must be diverted to drain.
- 3. Outlet Line: Connect 20mm tubing to the outlet drain. This is the sample water outlet flow. This line must be diverted to drain.

Figure 2 FR-200 Connections

#### 5.3. Terminal Wiring

The DW-2100P analyzer has universal AC power supply equipment allowing users simply to plug the power supply into a 100~240V AC 50/60Hz power outlet for normal operation.

Figure 3 Terminal Wiring Diagram

Figure 4 Terminal Physical Diagram

# **A**Warning

The process of electrical connection to contact the 220V single-phase power supply, should be operated by personnel with an electrician's license. Failure to operate according to the electrical code of practice may result in electric shock injury or even death.

# **Touch Screen Operation**

#### 6.1. Main Screen

After the system is powered on an initial screen allows the user to log into the system.

Figure 4 Main Screen

#### 6.2. User Login

After powering on the system, log in with the <u>username</u> and <u>password</u> to be able to change system settings. Click the "User Login" button, select the user "**pyxis**", enter the password: "**888888**" in the user password field. A new user can be added via "User Management" in interface of the menu.

g pyxis	User password:
	Logout way: <ul> <li>Online timeout</li> <li>Idle timeout</li> </ul>
	Online time: 0 Minutes
	User description:

Figure 5 User Login Screen

If you do not need a password, or want to change the user, you can enter the system and "Manage" in the "User Management" screen of the menu. See 6.11 for details.

#### 6.3. Real-Time Monitoring

Click the "Enter System" button on the main interface to enter the real-time monitoring screen of the system. The data detected by the Pyxis sensors will be displayed in real-time. See a functional overview of each section of this screen highlighted below. (numbers 1-4)

Figure 6 Real-time monitoring screen

Section Number	Functional Overview		
1	The blue area will scroll any alarm information in real time until the alarm is cleared.		
2	Real-time display of the current sensor's 4-20mA signal value.		
3	Real-time display of current sensor measurement value.		
4	Historical data is recorded as a live curve, with the horizontal coordinate being the time and the vertical coordinate being the measured value.		

Table 1 - Main interface functional overview

Press and hold the curve area for 2 seconds and then let go, the Y-axis curve range setting dialog box will appear. Users may change the display value range of Y-axis for each measurement index curve. Click the outter area of the screen to save and exit the setting screen after modifications are made.

Figure 7 Curve Range Setting

#### 6.4. Menu Bar

Click the **n** button in the upper left corner of the screen to enter the system's menu interface, where the user can select to enter the desired operation interface.

#### 6.5.2. Alarm Parameters Setting

Users can set the upper and lower alarm limits. Click "Alarm Parameters" to enter the alarm parameter settings. When the measured sensor value is lower than the set lower limit (the XX lower limit alarm) or when the measured value is higher than the set upper limit (the XX upper limit alarm), the corresponding sensor alarm will be displayed on the real-time monitoring screen. The user can also choose to turn the alarm display on or off at the top left of the corresponding parameter list.

Alarm Parameters	Х

Lower limit: 0.00	Lower limit: <b>0.000</b> NTU
Close Y FCL	
Upper limit: <b>0.000</b> mg/L	
Lower limit: <b>0.000</b> mg/L	

Figure 12 Alarm Parameter Setting

#### 6.5.3. Diagnostic Parameters

Click "Diagnosis Parameters" to the diagnosis page. In the diagnosis page, the raw data measured by the sensor is displayed. To help troubleshooting possible issues with the sensor, please save an image of this data when the sensor is placed in a clean water sample (tap water or deionized water), in a standard, and in the sample that the sensor is intended for.

Figure 13 Diagnostic Parameters

#### 6.5.4. 4-20mA Output Parameters Setting

Click "4-20mA Output " to enter the 4-20mA output parameter setting interface. The 4mA and 20mA output values should corresponds to the lower and upper limits of the sensor range. **\*NOTE**\* The closer the value is set to the measurement value the more accurate the data. It is recommended to set according to the range of the sensor.

4-20mA Output Parameters	Х
pH	Turbidity

Figure 16 Sensor Calibration

#### 6.6.1. pH Calibration

The pH function is thoroughly calibrated at the Pyxis Lab factory. After checking with a pH standard buffer solution, if the sensor value has shifted, then the user may choose from single-point, two-point or three-point calibration to re-calibrate the pH portion of the ST-765SS-FCL sensor as desired.

Figure 17 pH Calibration

#### Single Point pH Calibration

Remove the ST-765SS-FCL sensor and rinse 3x with DI water. Submerge the sensor into a beaker with pH=7 buffer solution. Click "pH7 calibration". A dialog box will pop up to confirm whether to perform this operation, click "OK" if the calibration operation is confirmed, if the calibration is successful the dialog box will show "calibration success".

Figure 18 pH Calibration Success Prompt

#### **Two Point pH Calibration**

Remove the ST-765SS-FCL sensor and rinse 3x with DI water. Submerge the sensor into a beaker with pH=7 buffer solution. Click "pH7 calibration". A dialog box will pop up to confirm whether to perform this operation, click "OK" if the calibration operation is confirmed, if the calibration is successful the dialog box will show "calibration success".

After pH7 is successfully calibrated, you can choose acid calibration or alkali calibration for the second calibration point. If you choose acid calibration, clean beaker 3x with deionized water. Fill the beaker with pH=4 buffer solution. Enter the value 4 in the calibration value dialog box, and click "Acid Calibration", then a dialog box will pop up to confirm whether to perform this operation. Click "OK" if the calibration operation is confirmed and the dialog box will show "Calibration Successful" if the calibration is successful. Similarly a pH=10 buffer solution can be selected for the second point calibration if desired.

Figure 19 pH Calibration Value Input

#### Three Point pH Calibration

Pyxis

Remove the ST-765SS-FCL sensor and rinse 3x with DI water. Submerge the sensor into a beaker with pH=7 buffer solution. Click "pH7 calibration". A dialog box will pop up to confirm whether to perform this operation, click "OK" if the calibration operation is confirmed, if the calibration is successful the dialog box will show "calibration success".

After pH7 is successfully calibrated, you can choose acid calibration or alkali calibration for the second calibration point. If you choose acid calibration, clean the beaker 3x with deionized water. Fill the beaker with pH=4 buffer solution. Enter the value 4 in the calibration value dialog box, and click "Acid Calibration", then a dialog box will pop up to confirm whether to perform this operation. Click "OK" if the calibration operation is confirmed and the dialog box will show "Calibration Successful" if the calibration is successful.

After successful acid calibration, select pH=10 for alkali calibration. Clean the beaker 3x with deionized water. Fill the beaker with pH=10 buffer solution. Enter the value 10 in the calibration value dialog box, and click "Alkali Calibration", then a dialog box will pop up to confirm whether to perform this operation. Click "OK" if the calibration operation is confirmed and the dialog box will show "Calibration Successful" if the calibration is successful. The three-point calibration is completed.

#### 6.6.2. Residual Chlorine Calibration

The residual chlorine measurement module of the ST-765SS-FCL sensor is thoroughly calibrated at the Pyxis Lab factory. To calibrate, the user can perform a single-point or two-point calibration according to the requirements of the application. (USEPA-334.0 / ISO-7393 compliant methodology)

#### Single Point Residual Chlorine Calibration

Use a portable or laboratory colorimeter to test the active (flowing) water sample in the FR-200 flow reservoir. DPD wet chemistry methodology is recommended. Once you have tested and confirmed the residual chlorine concentration value in the active (flowing) FR-200 flow reservoir, enter the test result value of the portable or laboratory colorimeter in FCL Calibration Screen and click "High Point Calibration". A dialog box will pop up to confirm whether to perform this operation. If the calibration operation is confirmed, click "OK", and if the calibration is successful, the dialog box will show "Calibration Success".

**\*NOTE**\* As an alternative, a standard residual chlorine solution (DPD residual chlorine standard is recommended) can also be used for calibration of the ST-765SS-FCL sensor while installed in the FR-200 flow reservoir. In order to calibrate the sensor with this approach, an external recirculation pump is required to ensure that the FR-200 flow reservoir is completely filled with the standard residual chlorine solution. A recirculation flow rate of 1,200-1,800ml/min is required for the ST-765SS-FCL to be properly calibrated using a known standard residual chlorine solution.

Figure 20 Residual Chlorine Calibration

User Manual

Figure 21 Awaiting execution Screen of Residual Chlorine Calibration

#### **Two Point Residual Chlorine Calibration**

The intercept in the ST-765SS-FCL sensor residual chlorine concentration formula is non-zero from the Pyxis Lab factory, however the user can make a <u>blank calibration</u> to correct the intercept in the residual chlorine concentration formula according to application needs.

#### Blank Calibration Procedure:

Pyxis

To achieve blank calibration of the ST-765SS-FCL sensor, close the water inlet valve and clean the FR-200 flow reservoir with deionized water 2-3 times. Then fill the FR-200 flow reservoir with the known zero calibration solution. After filling the FR-200 with zero calibration solution (PN:21022) or Conductivity Standard Solution (100 us/cm), wait for the ST-765SS-FCL sensor residual chlorine display value to stabilize on the touch-screen display. Sensor stabilization should occur within 15-minutes. Click "Zero Calibration" and a dialog box will pop up confirm whether your desire to perform this operation. Click "OK" to confirm the calibration operation. If the calibration is successful, the dialog box will show "Calibration Success". The sensor is now blank-calibrated to the known zero calibration solution.

#### Slope Calibration Procedure:

Use a portable or laboratory colorimeter to test the active (flowing) water sample in the FR-200 flow reservoir. DPD wet chemistry methodology is recommended. Once you have tested and confirmed the residual chlorine concentration value in the active (flowing) FR-200 flow reservoir, enter the test result value of the portable or laboratory colorimeter in FCL Calibration Screen and click "High Point Calibration". A dialog box will pop up to confirm whether to perform this operation. If the calibration operation is confirmed, click "OK", and if the calibration is successful, the dialog box will show "Calibration Success".

**\*NOTE**\* As an alternative, a standard residual chlorine solution (DPD residual chlorine standard is recommended) can also be used for calibration of the ST-765SS-FCL sensor while installed in the FR-200 flow reservoir. In order to calibrate the sensor with this approach, an external recirculation pump is required to ensure that the FR-200 flow reservoir is completely filled with the standard residual chlorine solution. A recirculation flow rate of 1,200-1,800ml/min is required for the ST-765SS-FCL to be properly calibrated using a known standard residual chlorine solution.

#### 6.6.3. Turbidity Calibration

The LT-739 Ultra Low Turbidity Sensor is rigorously calibrated at the Pyxis Lab factory. If the sensor is kept clean, the user will not need to calibrate the sensor for one year of operation. However, the user may calibrate the sensor as desired.

Figure 22 Turbidity Calibration Screen

Low-Range Calibration Procedure DI Water in the Pyxis L-CAL Portable Turbidity Calibration Kit: Isolate the panel and drain the piping and inline Tee assemblies. Remove the LT-739 sensor from the FT-100 flow tee. Triple rinse the LT-739 sensor surface, the FR-200 flow reservoir internals and the L-CAL Portable Turbidity Calibration Kit (P/N 53247) vessel with Deionized water. Insert the cleaned LT-739 turbidity sensor into the L-CAL calibration vessel and position the L-CAL vessel vertically (with the sensor inserted in a horizontal position to the ground as shown in the step-by-step images provided on page 31 of this manual). Remove the top cap and fill the L-CAL vessel with 500mL of bubble free deionized water. After the displayed turbidity data is stable, enter "0.05" for the low-range calibration value and click on "Low Range Calibration", a dialog box will pop up to confirm whether to perform this operation. Click "OK", if the calibration is successful, the dialog box will show "Calibration successful". \*NOTE\* Because there is no global standard for zero turbidity in the industry, Pyxis recommends 0.05 NTU as a target for Low-Point Calibration while using Bubble-Free DI Water.

Figure 23 Awaiting execution Screen of Turbidity Calibration

#### Mid-Range Calibration using the L-CAL Portable Turbidity Calibration Kit:

After the low range calibration has been completed, rinse the L-CAL vessel with Deionized water and refill with 500mL of known turbidity standard solution between 5NTU and 10NTU for mid-range calibration (see page 31). After the displayed data is stable, enter the medium turbidity standard solution value and click on "Mid Range Calibration", a dialog box will pop up to confirm whether to perform this operation. Click "OK", if the calibration is successful, the dialog box will show "Calibration successful".

#### High-Range Calibration using the L-CAL Portable Turbidity Calibration Kit:

If a high-range calibration is not required, the user does not need to perform a high-range calibration of the LT-739 series sensor. If a high calibration is required, proceed by rinsing the L-CAL vessel with deionized water and refill with known turbidity standard solution between 20NTU and 40NTU for high-range calibration (see page 31). After the displayed data is stable, enter the high turbidity standard solution value and click on "High Range Calibration", a dialog box will pop up to confirm whether to perform this operation. Click "OK", if the calibration is successful, the dialog box will show "Calibration successful".

#### **Troubleshooting Calibration Failed Messages**

If you receive a "Calibration Fails" message during the calibration steps above, the following items should be checked:

- 1) Ensure your source of Deionized water is not contaminated with turbidity
- 2) Ensure your turbidity calibration standard solutions have not been contaminated
- 3) Ensure the LT-739 sensor distillate end is not contaminated with debris or other substances
- 4) Ensure the FR-200 flow reservoir is not contaminated or circulation blocked by debris or other materials.

# Pyxis

User Manual

#### LT-739 Calibration using L-CAL Portable Turbidity Calibration Kit

As an alternative to using the FR-200 flow reservoir for LT-739 sensor calibration, Pyxis Lab has developed a portable and reusable liquid-state turbidity calibration kit for rapid calibration of the all LT-73X Series inline ultra-low turbidity sensors. The L-CAL calibration kit allows users to calibrate all LT-73X Series ultra-low turbidity sensors using <u>smaller volumes of Formazin</u> turbidity calibration standards providing an affordable and reusable solution for long term sensor reliability. The unique design of the L-CAL liquid calibrated with the sensor in a horizontal position, allowing air bubbles to be evacuated through the integrated airvent line ensuring superior accuracy of the sensor calibration. The L-CAL has an easy to remove lid allowing users to fill and empty the calibration kit with DI water for vessel/sensor cleaning and Formazin calibration.

L-CAL Liquid Turbidity Calibration Kit (P/N 53247)

#### **Turbidity Calibration Principals & Considerations**

The precision, resolution and the low detection limit of the LT-73X Series sensors are not affected by the calibration method, regardless of using certified Formazin standards and the L-CAL kit. The calibration only affects the turbidity sensor accuracy. The nature of turbidity measurement makes an absolute turbidity value not easily obtainable for any sensor manufacturer although proper standards and methods are followed. For example, turbidity values greater than 1.0 NTU measured on real-world samples with different sensors, even from the single manufacturer, could differ significantly. For ultra-low turbidity (less than 0.3 NTU) measurement using the same methods (ISO-7027 or EPA-180.1), it is likely that the values from different sensors can agree within 0.05 NTU. As such, the user should choose a calibration method and remain with the same calibration method for consistency.

#### L-CAL Specifications

Item	L-CAL Portable Liquid Formazin Calibration Kit		
P/N	53247		
Sensor Name	LT-739 / LT-739B		
Calibration	Recommended Calibration Standard Solution Range		
Low-Range (0.05NTU Recommended for Calibration)	Bubble Free DI Water or Sample <0.1 NTU		
Mid-Range	5 – 10 NTU		
High-Range	20 – 40 NTU		

# Pyxis

#### L-CAL Portable Liquid Formazin Calibration Kit Use Method

After removing the LT-73X sensor, gently wipe off the flat distal end with a soft cloth to ensure it is clean. The LT-73X Sensor should then be calibrated using the L-CAL portable liquid calibration kit using the following steps, and wirelessly calibrated via the uPyxis Mobile or Desktop APP. Please refer to LT-73X Series Operation Manual for details.

WATCH PROCEDURE VIDEO https://www.youtube.com/watch?v=1MuJM5Q5VB4

#### 6.7. Recovering Data

Click the restore button in the calibration interface of each sensor to restore the data of pH/residual chlorine sensor and turbidity sensor. If a user error is made during calibration and other operations, you may restore the factory settings of the sensor through the restore function.

#### 7.2. Operation and Maintenance

After the analyzer is installed by a qualified technician, it can begin to monitor water quality. The DW-2100P inline detection system is designed to be simple to operate, but still requires some regular maintenance. Actual system maintenance may vary depending on the installation conditions and usage. Please refer to the table below as a general recommended maintenance schedule.

Minimal operator intervention is required during normal operation.

Required Services	Recommended Frequency
Cleaning DW-2100P Inlet Water Filter	Monthly or Cleaned As Needed
Cleaning of FR-200 Flow Reservoir and Photoelectric Pole	Monthly
pH Calibration	Every 6 Months
Turbidity Calibration	Every 6 Months
Residual Chlorine Calibration	Every 6 Months

Table 3 - Maintenance Intervals

#### 7.3. Instrument Alarms and Descriptions

Please refer to the instrument alarms and descriptions table when troubleshooting the DW2100P inline inspection system issues an alarm or indicates abnormal measurement data.

# 8. Replacing pH and Oxidizer Electrode Head

The pH/oxidizer electrode head of ST-765SS Series can be replaced when the original electrode head reaches its working life. Order a replacement electrode head EH-765 (P/N 53061) from Pyxis and follow instructions as below.

- 1. Turn off the sensor if it is powered on.
- 2. Make sure there is no water on the sensor.
- 3. Hold the ST-765SS main body with one hand and use the other hand to twist the stainless-steel locking ring counter-clockwise until the front end of the black electrode is completely unscrewed, as shown in *Figure 39-2*.
- 4. Pull out the electrode head as shown in *Figure 39-3*.
- 5. Loosen the electrode plug connector, and remove the electrode head, as show in *Figure 39-4*.
- 6. To assemble the new electrode head, connect the plug, then insert the new electrode head into the main sensor housing and ensure that the two protrusions on the electrode head are aligned with the notches in the sensor main housing.
- 7. Then twist the stainless-steel lock ring of ST-765SS in a clockwise direction until the threads of the electrode head completely enter the ST-765SS housing as shown in *Figure 39-1*.

Setting the Date and Time and Firmware Update Procedure

- 9.1. Setting the Date and Time
- 1) When the device is powered on again, when the following screen appears on the screen, tap the screen immediately

Starting Hold the touch screen to enter the system settings.	

2) Enter the system interface, as shown in the figure below, click the button "System setting"

Software version :3.3.2.5883
The unique serial number is :a528919bbf713073c4b33795
IP address:192.168.0.3
The operating environment has been authorized.(0-0)
Product number:7796683200800768
System setting
Run project
Hold the screen 3 seconds at least for entering touch calibration

3) Enter the setting interface, select the time parameters, as shown in the figure below, and modify the time. After the modification is completed, click the "OK" button to confirm. After closing the setting interface, click "Run project" to enter the program running interface.

#### 9.2. Firmware Update Procedure

- 1) Decompress the program update package, copy the "**tpcbackup**" file and save it to a USB flash drive in "FAT32" format. **\*NOTE\*** *You need to copy the entire folder to the root directory of the USB flash drive.*
- 2) Insert the USB flash drive into the USB1 port on the rear of the touch screen.
- 3) After inserting the USB flash drive, the touch screen will pop up. Click "**YES**" and wait for the screen to jump, as shown below.

4) In the new pop-up box, click "Download Project", as shown below.

5) In the new pop-up box, select the program name on the left and click "**Download**". The touch screen will start to download the program. See figure below

	Notes:you can not power off or pull out the
Project list	Udisk during the download process!
DW-2030P	
	Reboot Stop Download

6) When the rewind is over, the touch screen will restart, and the screen will turn black during the restart. At this time, you can pull out the USB disk, as shown in Figure 4

 If the update screen appears again after restart, please click "NO" and pull out the USB disk, as shown in Figure 5

# **10. Order Information**

Order Information	P/N
DW-2100P-US (Drinking Water Analyzer for EPA-180.1 Compliant Markets)	42135
DW-2100P-EU (Drinking Water Analyzer for ISO-7027 Compliant Markets)	42136
DW-2100P-US-G (DW-2100P-US with optional Pyxis CloudLink <sup>TM</sup> 4G Gateway)	42137
DW-2100P-EU-G (DW-2100P-EU with optional Pyxis CloudLink <sup>TM</sup> 4G Gateway)	42138
Optional / Replacement Accessories Information LT-739 Ultra-Low Turbidity (Warm White LED 0.000-40. 00 NTU)	P/N 53221
LT-739B Ultra-Low Turbidity (InfraRed 860nm LED 0.000-40. 00 NTU)	53225
ST-765SS-FCL (Free Chlorine + pH + Temperature Sensor w/Internal Compensation – Sensor Only)	53607-NFR
EH-765 (Replacement Electrode Head for ST-765SS-FCL)	53061
FR-200 Dual Sensor Flow Reservoir Assembly	50781
FRP-200 (Motorized Brush Cleaning Module for FR-200)	50700-A17
FRP-200-1 (Replacement Brush for FRP-200)	50700-A15
L-CAL (Portable Liquid Formazin Calibration Kit for LT-73X Series Sensors)	53247
LT-SOLID-CAL 739 (Solid State Calibration Kit for LT-739 - 0.1 / 8.0 / 25 NTU)	53229
LT-SOLID-CAL 739B (Solid State Calibration Kit for LT-739B - 0.1 / 8.0 / 25 NTU)	53239
Pyxis Turbidity Calibration Std – 10.0 NTU (4,000mL)	57010-10L
Pyxis Turbidity Calibration Std – 30.0 NTU (4,000mL)	57010-30L
Pyxis pH Combo Calibration Pack (pH 4-7-10 Calibration Solution 3-Pack - 500mL ea.)	57007
Global Prepaid SIM Card for Wireless Data Access (1-Year)	CLD-SIM-01
